

LinkedChain

white paper

V1.0

1) introduction :

With a very competitive job market and employers left with huge applicant pools to pull viable candidates from, it is a necessity now more than ever to require a certain level of education for key positions.

2) Problem :

Roughly 200,000 bogus degrees are awarded to students, or “customers” around the world on an annual basis.

The cost of these “fake” degrees on average is between \$500 and \$2,500.

A college degree is the second most expensive purchase a consumer will make in their lifetime, second to their home.

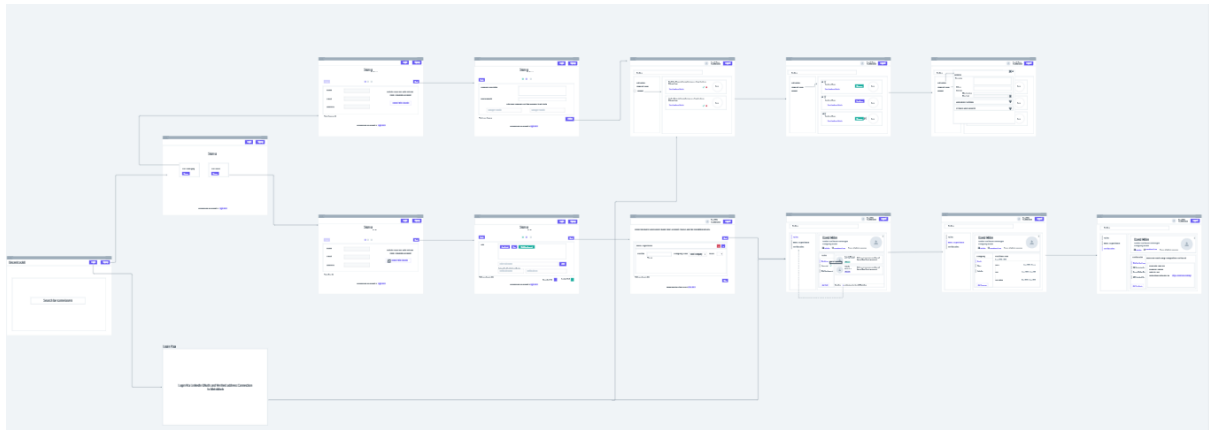

There are over 370 educational websites that offer fraudulent degrees.

30% of job candidates lie about their education on their resume or job application.

3) Solution :

- Tokenize the diploma like an NFT .
- A social media where users can post their diploma and curriculum vita .
- An RH solution where they can find talents .
- solution for students who search for courses and pay with LinkedChain token .

4) How it work

5) road map :

Q1 2022 : white paper & pitch deck .

Q2 2022 : develop the first version of the Dapp .

Q3 2022 : partnership with 100 organismes .

Q4 2022 : ico and official launch .

6) about the team :

ADAM BEN HADJ AISSA : software developer .

Youssef GHARBI : DATA scientist .

Hamdi MEJRI : Marketing Consultant .

Ezdin GHARBI : WEB3 developer .
